

# CONTAINER SOLUTIONS

## Deliver at the speed of client expectations.

Keeping pace with fast changing business and market landscapes has never been more challenging. Best in class organizations are adapting by leveraging infrastructure as code; a more sophisticated approach to provisioning and configuring infrastructure that utilizes a microservice strategy in conjunction with containerization and orchestration to the cloud, rather than the traditional manual processes used by IT operations teams. Containerized solutions empower organizations to continuously deploy granular services with the desired agility, flexibility, portability and precision to remain competitive and relevant. These solutions also help organizations see a much faster ROI on features developed while dramatically reducing testing cycles throughout automatization.

### Our container capabilities include:

- Container Orchestration
- Kubernetes
- Docker Swarm
- Microservices Strategy
- Azure Service Fabric
- Cloud Agnostic Portability
- Docker
- CI/CD Tool Chain

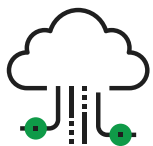

### Why trust HMB's Container Solutions?

We make an impact. Our infrastructure experts have reliably delivered these solutions for a variety of industries.

We deliver using cost-effective models. Our IT services can be delivered remotely via our Development Center or onsite.

We align and engage leadership. Successful implementations require both management and teams to be aligned and engaged.

We manage what we implement. When you partner with HMB, you'll have a dedicated team of experts who are only a call away.
