

BUSINESS APPLICATIONS

Easily build the business apps you need and extend or customize the apps you already use.

Want to know the future of app development in the modern enterprise? It's not custom. It's platform-centric. Platforms like Microsoft 365 and PowerApps allow organizations to build apps fast with a point-and-click approach, and then easily connect their app to data.

Use Excel-like expressions to easily add logic and publish to the web or any device of your choosing. Pro-developer extensibility is natively built into the platform, allowing developers to seamlessly extend app capabilities using Azure Functions or custom connectors for legacy systems.

Our Platform Development capabilities include:

- Microsoft 365
- PowerApps
- Flow

By leveraging platforms, IT teams can quickly spin up low code solutions for faster delivery than traditional custom apps. Moreover, because platforms are cloud-based, you never have to spend time updating or maintaining your apps. The platform provider does this automatically and pushes updates to all users.

Why Trust HMB's Platform Development?

We are scalable

Leverage our 250 full-time consultants and network of off-, near-, and on-shore partners.

Our successful track record

We have implemented a variety of Azure solutions for clients in many industries.

Flexible delivery methods

Our engagement models are designed to fit your business needs.
